

NB: The following are pages from a Sample Query/400 Evaluation Report. A full sample report is available on request.

One off Queries by Creator

One off queries are defined as those where the "last used date" is the same as the "creation date" and the query has not been used in the last six months. If these queries are not likely to be used again, it is recommended that they be deleted.

There are 231 "One-off" queries owned by 33 different users and spread across 15 Libraries. There are another 240 One off Queries created in the last six months. There may be a number of others which, due to their low usage count and proximity of "Last used date" to "Creation date", that could also be considered in this category.

A full Table of Creators of One off Queries is available under appendix 'E'

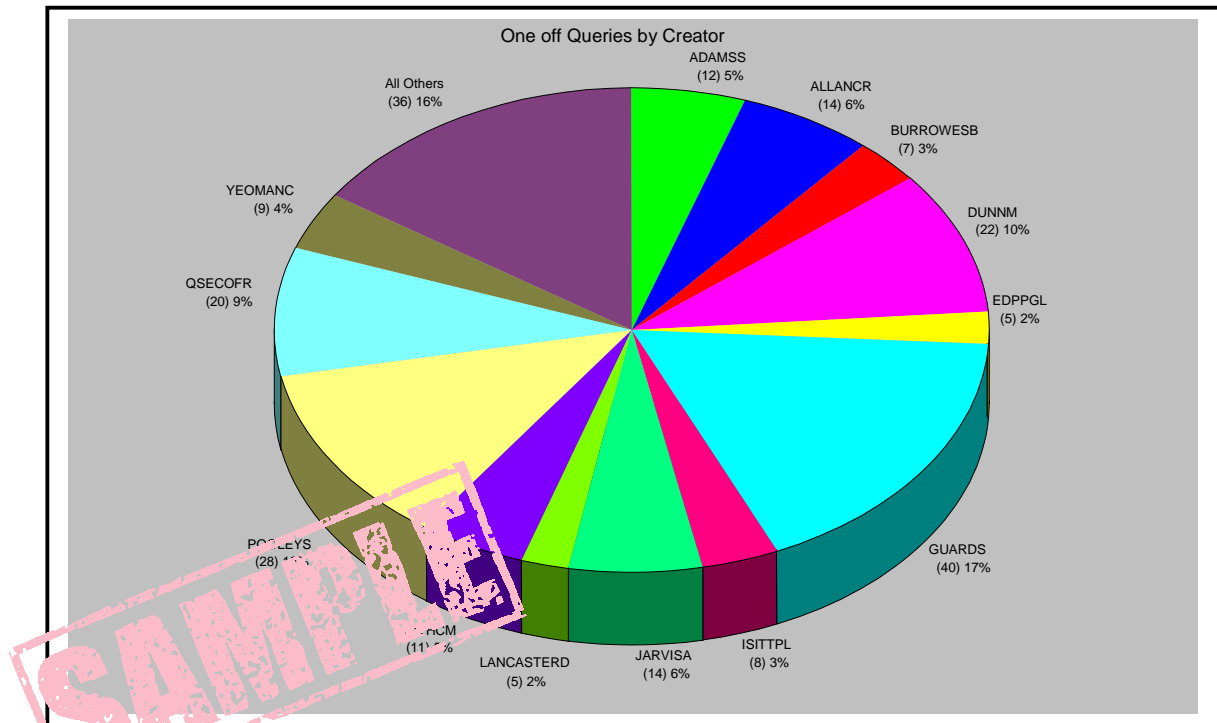

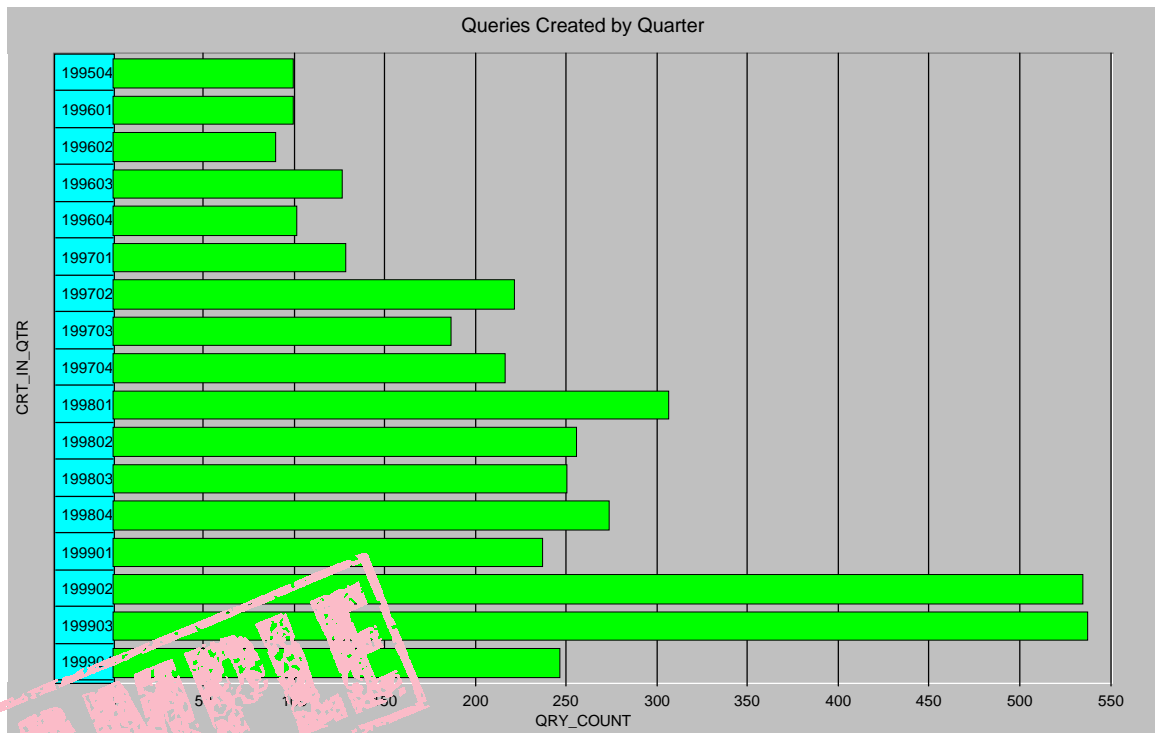

Chart of One off Queries by Creator

Query Creation History

From the Bar Chart below it can be seen that Queries continue to be created at a significant rate. The data indicates that over 1500 Queries were created in calendar 1999 (on average, 6+ Queries were created every working day of the year). We believe that a significant management problem will result if this trend continues.

Queries created by Quarter since 1996
